Rapid Deployment Mobile Field Hospital
Mobile Alternate Care Site (ACS)

The U.S. Combatant Commands require within the Force Protection & Medical category the need to provide “far-forward, remote/austere tactical combat casualty care/prolonged field care,” “to extend the golden hour,” and to provide “rapid response to pandemic influenza/infectious disease occurrence at home and abroad.” MustER Medical Response System (MRS) meets this need with a rapidly deployable, self-contained expeditionary medical treatment center designed to incorporate health care delivery modernization into the Army Future Power.

Equally important, MustER functions as a multiplier of support to local and global healthcare systems in the event of a disaster, mass casualty incident, public health emergency, or in support of the Global Health Security Agenda by increasing ICU hospital bed capacity due to patient surges.
