Laundry Stain Remover

Dirt, oil, and grease stains on military uniforms are inevitable and often require chemical treatments for proper removal. Currently, stains are treated with spray-on pretreatments, relying on the user to recall the existence and location of the stain at the time of washing. If a user forgets to add this pretreatment, they are likely to dispose of the clothing, adding to the environmental damage caused by the plastic spray bottles which hold the pretreatment. Dirty Laundry, LLC has designed a dissolvable peel-and-press patch that delivers a stain pretreatment at a more convenient time, place and method. The stain remover is sandwiched between a liner and a dissolvable film so that it can be stuck onto the fabric and tossed into the hamper any time before the wash. This eliminates the spray bottle, creating a more convenient and environmentally friendly packaging concept. It has been proven that consumers prefer environmentally conscious products in addition to convenience and efficacy, and both the packaging and convenience of this patch will reduce the amount of plastic and clothing sent to landfills on a regular basis.
